

VACATURE: Test Automation Engineer

Job description

- Take responsibility for quality assurance of our product as the final gatekeeper before Production, by validating both functional and non-functional acceptance criteria of any change
- Create test cases and prepare test data. Interact with your colleagues of the agile development team and report on progress of your test case execution.
- Write test scripts to increase test coverage of our product in line with our automation strategy
- Increase quality and release frequency in our continuous delivery process as your ultimate mission

Profile

You are

- A true team-player
- A natural born communicator
- Obsessed with quality
- Self-organized
- Fluent in English

Competencies

You have

- Experience transforming acceptance criteria into functional and non-functional test cases
- A solid understanding of the software development lifecycle and testing methodologies specifically
- Experience working with test automation (e.g. Selenium, Cucumber and Java) or a strong willingness to acquire these skills
- Experience testing web API's (eg Postman or comparable)
- Experience with load tests based on JMeter scripts is a plus
- Experience with mobile test automation is a plus (e.g. Appium & Browserstack)
- A 'let's get this done' mentality and an eagerness to expand your knowledge

Offer

- You will join a close and passionate team of 30 colleagues. All are experts in their field with an outspoken do-mentality.
- Personal development through on-the-job learning in combination with training keeps you sharp.
- You work in Leuven, close to the station, in a 40-hour week with 12 ADV days and a home working policy.
- A competitive salary with extralegal benefits such as a company car

What is Doccle?

Doccle is the largest online platform for digital administration in Belgium. With a community of over 2.4 million users and a community of over 150 partners, we facilitate the administration of our users.

Founded in 2014 as a cooperative company, we still have the culture of a start-up but are backed by 2 strong investors who have expressed the ambition to make Doccle, the platform of the future.
